

GCSE COMPUTER SCIENCE

You will take two exams, both are 90 minutes long.

IMPORTANT: Computer science will be one of the first exams in the June exam series so don't put off your revision!

<p>14th May 2018 : Paper 1 : Computer systems</p> <ul style="list-style-type: none"> • Systems Architecture <ul style="list-style-type: none"> • Memory • Storage • Wired and wireless networks • Network topologies, protocols and layers <ul style="list-style-type: none"> • System security • System software • Ethical, legal, cultural and environmental concerns

<p>17th May 2018 Paper 2: Computational thinking, algorithms and programming</p> <ul style="list-style-type: none"> • Algorithms • Programming techniques • Producing robust programs <ul style="list-style-type: none"> • Computational logic • Translators and facilities of languages <ul style="list-style-type: none"> • Data representation

This is a checklist of topics you need to know for your Computer Science exam.

Content of Computer systems	Tick here when you understand it.
<p><u>Systems architecture:</u></p> <ul style="list-style-type: none"> • the purpose of the CPU • Von Neumann architecture: <ul style="list-style-type: none"> - MAR (Memory Address Register) - MDR (Memory Data Register) - Program Counter - Accumulator • common CPU components and their function: <ul style="list-style-type: none"> - ALU (Arithmetic Logic Unit) - CU (Control Unit) - Cache • the function of the CPU as fetch and execute instructions stored in memory • how common characteristics of CPUs affect their performance: <ul style="list-style-type: none"> - clock speed - cache size - number of cores • embedded systems: <ul style="list-style-type: none"> - purpose of embedded systems - examples of embedded systems 	

<u>Memory:</u>	
<ul style="list-style-type: none"> • the difference between RAM and ROM • the purpose of ROM in a computer system • the purpose of RAM in a computer system • the need for virtual memory • flash memory 	
<u>Storage:</u>	
<ul style="list-style-type: none"> • the need for secondary storage • data capacity and calculation of data capacity requirements • common types of storage: <ul style="list-style-type: none"> - optical - magnetic - solid state • suitable storage devices and storage media for a given application, and the advantages and disadvantages of these, using characteristics: <ul style="list-style-type: none"> - capacity - speed - portability - durability - reliability - cost 	
<u>Wired and wireless networks:</u>	
<ul style="list-style-type: none"> • types of networks: <ul style="list-style-type: none"> - LAN (Local Area Network) - WAN (Wide Area Network) • factors that affect the performance of networks • the different roles of computers in a client-server and a peer-to-peer network • the hardware needed to connect stand-alone computers into a Local Area Network: <ul style="list-style-type: none"> - wireless access points - routers/switches - NIC (Network Interface Controller/Card) - transmission media • the internet as a worldwide collection of computer networks: <ul style="list-style-type: none"> - DNS (Domain Name Server) - hosting - the cloud • the concept of virtual networks 	

Content of Computer systems	
<u>Network topologies, protocols and layers:</u>	
<ul style="list-style-type: none"> • star and mesh network topologies • Wifi: <ul style="list-style-type: none"> - frequency and channels - encryption • ethernet • the uses of IP addressing, MAC addressing, and protocols including: <ul style="list-style-type: none"> - TCP/IP (Transmission Control Protocol/Internet Protocol) - HTTP (Hyper Text Transfer Protocol) - HTTPS (Hyper Text Transfer Protocol Secure) - FTP (File Transfer Protocol) - POP (Post Office Protocol) - IMAP (Internet Message Access Protocol) - SMTP (Simple Mail Transfer Protocol) • the concept of layers • packet switching 	
<u>System security:</u>	
<ul style="list-style-type: none"> • forms of attack • threats posed to networks: <ul style="list-style-type: none"> - malware - phishing - people as the 'weak point' in secure systems (social engineering) - brute force attacks - denial of service attacks - data interception and theft - the concept of SQL injection - poor network policy • identifying and preventing vulnerabilities: <ul style="list-style-type: none"> - penetration testing - network forensics - network policies - anti-malware software - firewalls - user access levels - passwords - encryption 	

<u>Systems software:</u>	
<ul style="list-style-type: none"> • the purpose and functionality of systems software • operating systems: <ul style="list-style-type: none"> - user interface - memory management/multitasking - peripheral management and drivers - user management - file management • utility system software: <ul style="list-style-type: none"> - encryption software - defragmentation - data compression - the role and methods of backup: <ul style="list-style-type: none"> - full - incremental 	
<u>Ethical, legal, cultural and environmental concerns</u>	
<ul style="list-style-type: none"> • how to investigate and discuss Computer Science technologies while considering: <ul style="list-style-type: none"> - ethical issues - legal issues - cultural issues - environmental issues - privacy issues • how key stakeholders are affected by technologies • environmental impact of Computer Science • cultural implications of Computer Science • open source vs proprietary software • legislation relevant to Computer Science: <ul style="list-style-type: none"> - The Data Protection Act 1998 - Computer Misuse Act 1990 - Copyright Designs and Patents Act 1988 - Creative Commons Licensing - Freedom of Information Act 2000 	
<u>Content of Computational thinking, algorithms and programming</u>	
<p>Algorithms:</p> <ul style="list-style-type: none"> • computational thinking: <ul style="list-style-type: none"> - abstraction - decomposition - algorithmic thinking • standard searching algorithms: <ul style="list-style-type: none"> - binary search - linear search • standard sorting algorithms: <ul style="list-style-type: none"> - bubble sort - merge sort - insertion sort 	

- how to produce algorithms using:
 - pseudocode
 - using flow diagrams
 - interpret, correct or complete algorithms
- Programming techniques:
- the use of variables, constants, operators, inputs, outputs and assignments
 - the use of the three basic programming constructs used to control the flow of a program:
 - sequence
 - selection
 - iteration (count and condition controlled loops)
 - the use of basic string manipulation
 - the use of basic file handling operations:
 - open
 - read
 - write
 - close
 - the use of records to store data
 - the use of SQL to search for data
 - the use of arrays (or equivalent) when solving problems, including both one and two dimensional arrays
 - how to use sub programs (functions and procedures) to produce structured code
 - the use of data types:
 - integer
 - real
 - Boolean
 - character and string
 - casting
 - the common arithmetic operators
 - the common Boolean operators
- Producing robust programs:
- defensive design considerations:
 - input sanitisation/validation
 - planning for contingencies
 - anticipating misuse
 - authentication
 - maintainability:
 - comments
 - indentation

- the purpose of testing
- types of testing:
 - iterative
 - final/terminal
- how to identify syntax and logic errors
- selecting and using suitable test data

Content of Computational thinking, algorithms and programming

Computational logic:

- why data is represented in computer systems in binary form
- simple logic diagrams using the operations AND, OR and NOT
- truth tables
- combining Boolean operators using AND, OR and NOT to two levels
- applying logical operators in appropriate truth tables to solve problems

- applying computing-related mathematics:

- + - / *
- Exponentiation (^)
- MOD
- DIV

Translators and facilities of languages:

- characteristics and purpose of different levels of programming language, including low level languages
- the purpose of translators
- the characteristics of an assembler, a compiler and an interpreter
- common tools and facilities available in an integrated development environment (IDE):

- editors
- error diagnostics
- run-time environment
- translators

Data representation:

Units

- bit, nibble, byte, kilobyte, megabyte, gigabyte, terabyte, petabyte
- how data needs to be converted into a binary format to be processed by a computer.

Numbers

- how to convert positive denary whole numbers (0–255) into 8 bit binary numbers and vice versa
- how to add two 8 bit binary integers and explain overflow errors which may occur
- binary shifts
- how to convert positive denary whole numbers (0–255) into 2 digit hexadecimal numbers and vice versa
- how to convert from binary to hexadecimal equivalents and vice versa

- check digits.

Characters

- the use of binary codes to represent characters
- the term 'character-set'
- the relationship between the number of bits per character in a character set and the number of characters which can be represented (for example ASCII, extended ASCII and Unicode).

Images

- how an image is represented as a series of pixels represented in binary
- metadata included in the file
- the effect of colour depth and resolution on the size of an image file.

Sound

- how sound can be sampled and stored in digital form
- how sampling intervals and other factors affect the size of a sound file and the quality of its playback:

- sample size
- bit rate
- sampling frequency.

Compression

- need for compression
- types of compression:
 - lossy
 - lossless
